New genes and its encoded prostate cancer antigen proteins, useful for preventing, treating, ameliorating or diagnosing e.g. prostate cancers, thymic hypoplasia, multiple sclerosis, AIDS, angina pectoris or cerebral ischemia.

Claim 4; SEQ ID NO 255; 260pp; English.

The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polynucleotide for producing human secreted proteins are useful for preventing, treating, amplicating or disgnossing medical conditions such as hyperproliferative clisorders (e.g. pleukaemia or breast cancers), wounds, reproductive disorders (e.g. leukaemia or breast cancers), wounds, reproductive clisorders, blood-related disorders (e.g. haemophilia or thrombooytopaenia), immunodeficiencies (e.g. graff-versus-host disease, thymic hypoplasia), autoimmune disorders (e.g. graff-versus-host disease, cultiple sclerosis or Hashimoto's thyroiditis), allergies (e.g. asthma), ciral or bacterial or fungal infections (e.g. AIDS or sepsis), renal clisorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, cerebral ischaemia or congenital heart defects), respiratory clisorders, neurological disorders (e.g. AIDS or sepsis). The partines disorders disease), and inflammations (e.g. AIDS or sepsis). The carboral ischaemia or congenital neart defects), respiratory confisorders, disease), and inflammations (e.g. Crohn's disease). The partined or polypeptide may also be used as vaccine adjuvants. ACMS2641-ACD8250 encode human secreted proteins or their fragments. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the cycle used site at seqdata.uspto.gov/psipablibEntry.html

```
polypeptide, or its fragment, domain, epitope or species homologue; or a polymucleotide that hybridises under stringent conditions to any one of the sequences of (a) -(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medical condition e.g., cancer. The sequence encodes a novel human secreted protein of the invention.
                                                                                                                                                                                                                                                 262 GCGGTGCACGATCTGATTTTCTGGAGAGATGTGAAGAAGACTGGGTTGTCTTTGGCACC 321

Isolated nucleic acid molecules encoding human secreted proteins, useful for preventing, diagnosing and treating disorders associated with aberrant expression and activity.

Claim 3; SEQ ID NO 255; 142pp; English.

The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, disgnosis and treatment of diseases associated with inappropriate SP expression e.g. cancer, haematopoietic disorders, chiseases of the immune system, inflammatory endocrine disorders diseases of the immune system, inflammatory cancers and many others. Full decails of disorders that may be used as proteins. The nucleic acid molecules may be used to produce their specification. The nucleic acid molecules may be used to produce their specification. The nucleic acid molecules may be used to produce their specification. The nucleic acid molecules may be used to proteins. The nucleic acid in samples, and therefore which used as DNA probes in diagnostic assays to detect and quantitate the prosence of similar nucleic acids in samples, and therefore which presence of similar nucleic acids in samples, and therefore which assays to identify modulators of SP expression and activity. The anti-SP antibodies may also be used as diagnostic and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          80
                                                                                                                                                               The invention relates to a novel method for detecting soft tissue sarcome which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and domparing the gene expression, also useful in treating soft tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SerValValAspLeuLeuTyrTrpArgAspIleLysLysThrGlyValValPheGlyAla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        440 ATCCTGGCTCTTCTCTCTGTCACCATCAGCTTCAGGATCTACAAGTCCGTCATCAAGGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a method for predicting a toxic effect
of a compound. The method comprises preparing a gene expression profile
of a tissue or cell sample exposed to the compound, and comparing the
gene expression profile to a database comprising SEQ ID 1-4925, where
differential expression of the gene indicates at least one toxic effect.
The method is useful for predicting at least one toxic effect of a
compound, identifying an agent that modulates the onset or
progression of a toxic response, predicting the cellular pathways that a
compound modulates in a cell, and identifying an agent that modulates at
least one activity of a protein. The method and compositions of the
present invention using a database of genes having liver toxin-induced
differential expression, are useful in identifying toxicity markers in
liver tissues or cells for drug screening and toxicity markers in
liver tissues or cells for drug screening and toxicity assays. Note: The
specification, but was obtained in electronic format directly from WIPO

                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                           The present invention relates to a method for diagnosing, or evaluating progression of, a neurcomuscular disease. The method comprises detecting modulation of the expression of a product (I) of the RTM (reticulon)3 gene. Differential expression of RTM3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (1) antibodies specific for isoforms of RTM3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RTM3 are useful in screening for therapeutic agents. The present sequence is a RTM3 DNA sequence used to illustrate the invention.
                                                                                                                                                                               prognosing and monitoring neuromuscular disease, particularly lateral sclerosis, comprises detecting modulation of the

the present through a comprision (a) the full-length coding region of (a); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% captuence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (1) an expression vector comprising the above (a)-(c). Also described: (1) an expression vector comprising the above comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide (comprising) (a) an amino acid sequence encoded by any of the above comprising the above polypeptide (a) or (b); (5) a chimeric polypeptide (baving at least 80% identical to (a) or (b); (5) a chimeric polypeptide; (a) an isolated antibody, that binds to the above polypeptide; (6) a comprising the antibody that binds to the above polypeptide; (7) a process for producing the antibody; (8) an isolated antigonic target (TAT) binding organic molecule that binds to the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above polypeptide; (10) a composition of matter comprising the above p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                with a carrier (11) an article of manufacture comprising a container and the composition of matter contained within the container; (12) methods of inhibiting the growth of a cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth potentiating effect of the above protein; (13) a method of therapeutically treating a mammal having a cancerous tumour comprising cells that express the above protein; (14) a method of determining the presence of a protein in a sample suspected of containing the described above; (15) methods of diagnosing the presence of a tumour in a

mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               480

current (TAMT) nucleic acid comprising: (a) any of 4622 nucleotide antigenic target (TAMT) nucleic acid comprising: (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% acquences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (c). Also described: (l) an expression vector comprising the above (a)—

(c). Also described: (l) an expression vector comprising the above correction of a process for producing a polypeptide; (4) an isolated polypeptide (comprising: (a) an amino acid sequence encoded by any of the above correction of the above nucleotide sequences; (b) an amino acid sequence encoded by the full-correction sequences; (b) an amino acid sequence encoded by the full-corporation of the above polypeptide; (d) or (b); (5) a chimeric polypeptide; (c) an isolated antibody that binds to the above polypeptide; (d) a number above polypeptide; (g) a tumour-associated antipolic target (TAT) and compression of matter comprising the above polypeptide; (l) a tumour-associated antipolic target (TAT) antibody, (l) a tumour-associated antipolic target (TAT) antibody, (l) a tumour-associated antipolic target (TAT) antibody, (l) a tumour-associated antipolic target (TAT) antibody, (l) a tumour-associated antibody the polypeptide or TAT binding organic molecule that binds to the above polypeptide; (l) a composition of matter comprising the above polypeptide or TAT binding organic molecule, in combination of matter comprising the composition of matter contained within the container; (12) methods of the cell is a least in part dependent upon a growth the composition of matter contained within the container; (l) a method of potentialing effect of the above protein; (l1) a method of determining the protein in a sample suspected of containing the protein in a sample suspected of containing the protein in a sample suspected of containing the protein and (l1) a method of binding an antibody, oligopeptide or a protein and (l1) a method of binding an antibody, oligopept
TAT; cytostatic; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell proliferative disorder or cancer. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        present invention describes an isolated tumour-associated antigenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid molecule and encoded polypeptide, for diagnosing, preventing or treating cell proliferative disorders such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 2250 BP; 629 A; 469 C; 456 G; 696 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       human TAT cDNA sequence from the present invention.

New nucleic acid molecule and encoded polypeptide, for diagnosing, propression to treating cell proliferative disorders such as cancer.

May seventing or treating cell proliferative disorders such as cancer.

May separe (TMT) mucleic acid comprising: (a) any of 4622 mucleotide estences (see SEQ ID Noil to 6422); (b) the full-length coding region of (a) or (b); (d) a sequence that has 80% esquence (see SEQ ID Noil to 6422); (b) the full-length coding region of (a) or (b); (d) a sequence that has 80% esquence (see SEQ ID Noil to 6422); (b) the full-length coding region of (a) or (b); (d) a sequence that bybridises to (a)-(c). Also described: (1) an expression vector comprising the above comprising the above (c) and manno acid sequence encoded by the full-ength coding region of the above mucleotide sequences; (b) an amino acid sequence encoded by the full-ength coding region of the above mucleotide sequences; (b) an amino acid sequence encoded by the full-ength coding region of the above mucleotide sequences; (c) a sequence comprising the above polypeptide; (a) a chimeric polypeptide; (c) a chimeric polypeptide; (c) a chimeric polypeptide; (d) a chimeric polypeptide; (d) a chimeric polypeptide; (d) a chimeric polypeptide; (d) a chimeric polypeptide; (d) a chimeric polypeptide; (d) a composition of matter comprising the above polypeptide; (d) a composition of matter comprising the above polypeptide or TMF binding organic molecule that in mid correlation of matter comprising the above polypeptide or TMF binding organic molecule. The composition of matter contained within the container; (11) an exticle of manufacture comprising a container and thinking the growth of the call that expresses the above polypeptide or the growth of the cell is at least in part dependent upon a growth containing the above polypeptide or composition of matter contained within the container; (11) a method of cite above polypeptide or composition and mannal; (16) a method for treating or treating or treating or treating or treating or treati

The present invention describes an isolated tumour-associated antigenic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide sequences (see SEQ ID NO:1 to 4622); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% sequence identity to (a)-(c); or (e) a sequence that hybridises to (a)-(c). Also described: (l) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by the above nucleotide sequences; (b) an amino acid sequences encoded by the full-length coding region of the above nucleotide sequences; or (c) a sequence having at least 80% identical to (a) or (b); (5) a chimeric polypeptide.
                                                                                                                                                                                                               480

comprising the above polypeptide fused to a heterologous polypeptide; (6) an isolated antibody that binds to the above polypeptide; (7) a process cor producing the antibody; (8) an isolated olipopeptide that binds to the above polypeptide; (9) a tumour-associated antigence target (TAT) binding organic molecule; that binds to the above polypeptide; (10) a composition of matter comprising the above (chimmeric) polypeptide; (10) a composition of matter comprising organic molecule; in combination with a carrier; (11) an article of manufacture comprising a container and the composition of matter contained within the container; (12) methods of inhibiting the growth of a cell that expresses the above protein; where the growth of the cell is at least in part dependent upon a growth cell that express the above protein; (13) a method of determining the presence of a protein in a sample suspected of containing the protein cells that express the above protein; (14) a method of determining the presence of a protein in a sample suspected of containing the protein cannow, (15) methods of diagnosing the presence of a tumour in a mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expression or activity of the above protein; and (17) a method of binding an antibody, oligopeptide or organic molecule to a cell that expresses the protein described above.

The TAT sequences have cytostatic activities, and can be used in gene and preventing and methods are useful for diagnosing.

The method comprises detecting modulation of the expression of a product (1) of the RTN (reticulon)3 gene. Differential expression of RTN3 is a specific marker of neuromuscular disease. allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies specific for isoforms of RTN3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms are useful for treathing neuromuscular diseases and (ii) cells that express RTN3 are useful in screening for therapeutic agents. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.

                                                                                                                                                                                                                                                                                                                                  Key
                                                                                   RESULT
                                               셤
                                                                                                                                 The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (I) of the RTN (reticulon)3 gene. Differential expression of RTN3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (il) antibodies superific for isoforms of RTN3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2061

                                                                                                                                                                                                                                                                                                                                             small interfering RNA) that can block/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RNN3 are useful in screening for therapeutic agents. The present sequence is a RTN3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 81

The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (1) of the RTN (reticulon)3 gene. Differential expression of RTN3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular diseases, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies specific for isoforms of RTN3 or oligonucleotides (antisense sequences or small interfering RNA) that can block/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RTN3 are useful in screening for therapeutic agents. The present sequence is a RTN3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.
                                                                                                                                                                                                                                                                                                                                                                        Neuroprotective; Myotropic; neuromuscular disease; RTN3; reticulon 3; amyotrophic lateral sclerosis; ALS; myopathy; human; gene; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3072
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3073 TATGTTGGCATCGCCCGAGATCAGACCAATTGTTGAAAAGATCCAAGCAAAACTC 3132
                                                                                                                                                                The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (I) of the RTN (reticulon)3 gene. Differential expression of RTM3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amportant sclerosis (ALS) and myopathy. Also (i) antibodies specific for isoforms of RTM3 or oligonucleotides (antisense sequences or small interfering RMA) that can block/reduce expression of these isoforms express RTM3 are useful in screening for therapeutic agents. The present sequence is a RTM3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             161
                                                                Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  82 GluGluLeuValGlnLysTyrSerAsnSerAlaLeuGlyHisValAsnSerThrIleLys 101

The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (I) of the RTM (reticulon)3 gene. Differential expression of RTM3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies amyotrophic lateral sclerosis (ALS) and myopathy. Also (i) antibodies small interfering RNA) that can block/reduce expression of these isoforms are useful for treating neuromuscular diseases and (ii) cells that express RTM3 are useful in screening for therapeutic agents. The present sequence is a RTM3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.

Sequence 3253, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
PILE REFERENCE: CLO01307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   108 GTTGTTGACCTCCTGTACTGGAGAGACATTAAGAAGACTGGTGGTGTTTGGTGCCAGC 167

Patent No. 6703491

GENERAL INFORMATION

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-034

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                     41 AlaLeuAlaLeuLeuSerValThrIleSerPheArgIleTyrLy8GlyValIleGlnAla

RESULT 27

US-09-949-016-40170/c

Sequence 40170, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-04-14

PRIOR PLING DATE: 2000-10-03

PRIOR PLING DATE: 2000-10-03

PRIOR PLING DATE: 2000-10-03

PRIOR PLING DATE: 2000-10-03

PRIOR PLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOCTHARD: PSEC OF Windows Version 4.0

LENGTH: 601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     91 SeralaLeuGlyHisValAsnSerThrIleLysGluLeuArgArgLeuPheLeuValAsp 110

Betent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REPREMENCE: CLOOD1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR FILING DATE: 2000-10-20

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1905, Application US/09248796A

Patent No. 6747137
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND THERAPBUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPBUTICS
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPBUTICS
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT PILING DATE: 1999-02-13
PRIOR PEPLICATION NUMBER: US 60/074,725
PRIOR PEPLICATION NUMBER: US 60/074,725
PRIOR FILING DATE: 1998-02-13
PRIOR PEPLICATION NUMBER: US 60/096,409
PRIOR PEPLICATION NUMBER: US 60/096,409
PRIOR PEPLICATION NUMBER: US 60/096,409
PRIOR PILING DATE: 1998-08-13
NUMBER PO SEQ ID NOS: 28208
SEQ ID NO 1905
LENGTH: 1125
                                                                                                                                                                       APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPERBENCE: CL001307
